Investment Link Fund Performance Report May 2021

General Advice Warning

The information contained in this material is general information and intended for the use of professional advisers, researchers and trustees. It does not take into account the objectives, financial situation or needs of any person. These factors should be considered before acting on this information.

MCIS receives remuneration such as fees, charges or premiums for the products. Details of these payments including how they are calculated and when and how they are payable can be found in the relevant sales illustrations, or other disclosure document for each product.

Past performance is not a reliable indicator of future performance

The information in this presentation should not be considered a personal recommendation on any of the securities or stocks mentioned.

EXECUTIVE SUMMARY

The FBMKLCI Index fell 1.1% or 18 points MoM in May 2021 to close at 1,583.55. The market fell throughout the month and hit a low of 1,562 points before rebounding towards the end of the month. The weak performance was due to persistent increases in new Covid-19 cases in Malaysia, leading the government to expand MCO to the whole country from 12 May to 7 Jun.

Malaysia Government Securities (“MGS”) yield was seen steepening in May’21, backed by the worries of inflation risk and slower economy growth following the announcement of MCO 3.0. Brent crude oil prices continued to move higher to USD69.32/barrel (Apr’21: USD67.25/barrel) given the boosted optimism of returning demand. Ringgit weakened to MYR4.1252/USD (Apr’21: MYR4.0880/USD) due to the worsening COVID-19 pandemic in the country.

On the local economic data, the GDP growth remained in the negative territory at -0.5% YoY in 1Q’21 (4Q’20: -3.4% YoY) due to a year-long COVID-19 pandemic.

We believe that outlook for the local equity market is improving when the herd immunity is established by end of the year. It will be the key success factor as this will improve the domestic activities locally.

For fixed income, following the OPR cut by 125bps and SRR cut by 100bps in 2020, BNM is expected to tune monetary stance to slight dovish throughout 2021 given the hope of economic recovery post COVID-19 pandemic. The external risk factors such as trade war between US and China and the fluctuation in crude oil prices will continue to weigh on the local market, but we believe corporate bond space still provides attractive yields. As such, we will keep looking to buy on dips of corporate bonds if the opportunity arises.

Based on table below, on monthly basis, most of the funds outperformed their benchmarks except for Global Yakin Fund and Income Fund.

Policyholders are encouraged to focus into regular premium given the current risk and volatile period of the economic and market condition. Risk adverse investors should focus into income fund due to its less volatile as compared to equity related funds.

AsiaPac Fund Monthly Report (May 2021)

Investment Objective

To achieve steady income stream with potential growth in the Asia Pacific Region over medium to long term. The aim of the Fund is to outperform the S&P Ethical Pan Asia Select Dividend Opportunities Index over periods of five or more years.

Investment Strategy

To invest in Principal S&P Asia Pacific Ethical Dividend Exchange Traded Fund (ETF), managed by Principal Asset Management Berhad where the ETF is listed on the Singapore Stock Exchange.

The ETF focuses on top 40 ethical and high yielding stocks in the Asia Pacific Region excluding India, Taiwan, Japan, New Zealand and Philippines. The fund provides country diversification across the industry that is traded in US Dollar.

Risks

The Fund is considered low risk given the exposure to only one underlying securities with no attempt to select stocks individually or to take defensive positions in declining markets. Risk is managed at the management level, where the asset allocation of the fund to be reviewed on regular basis, and adjusted to commensurate with the Investment Team view on the relative attractiveness of each asset class.

The following factors can potentially affect the value of the Fund; economic and political developments in related countries, foreign exchange fluctuation, illiquid and inefficient securities in the Emerging Markets, and the financial performance of the underlying companies.

The target market is for investors who are seeking regional exposure from investment and at the same time, seeking for medium to long term capital appreciation with moderate market risk.

Fund Performance

For the month ended May 2021, the fund had outperformed the benchmark by 112bps MoM (month-on-month). The fund had outperformed the benchmark since inception.

Notice: Past performance is not indicative of future performance, and the performance of the Fund is not guaranteed.

The Fund returns are calculated by MCIS Life and based on the value of the NAV and for periods greater than 12-months are annualised numbers. Actual returns of the Fund are on a net basis (gross of tax and net of fees) and based on the performance of the Fund, and not the returns earned on the actual premiums/ contributions paid for the product.

* Index is S&P Ethical Pan Asia Select Dividend Opportunities sourced from Bloomberg.

The NAV per unit of the Fund is the total market value of assets in the Fund divided by the total number of units of the Fund. Transaction costs, taxes and applicable fees are provided for in the net asset value.

Balanced Fund Monthly Report (May 2021)

Investment Objective

The objective of the Balanced Fund is to provide security and income, while maintaining and potentially increasing the value of capital over the medium to long-term, through exposure across a range of asset classes. The Fund aims to outperform the performance benchmark over periods of three or more years.

Investment Strategy

To invest in Malaysian equities and fixed income securities, including government bonds and corporate debt securities. The asset allocation is reviewed on a regular basis, and is adjusted commensurate with our view on the relative attractiveness of each asset class.

Risks

The Fund is considered medium risk given the mixed exposure of equity securities, fixed income and cash. The following factors can potentially affect the value of the Fund; consumer sentiment, financial performance of the underlying companies, industry and economy development, social and political factors, and the liquidity of the underlying assets. Additionally, levels of interest rates, and credit downgrades of defaults can affect the value of fixed income securities

The target market is clients wanting the surety of insurance protection, with an element of potential upside investment exposure.

Fund Performance

For the month ended May 2021, the fund had outperformed the benchmark by 55bps MoM (month-on-month). The outperformance was mainly driven by lower exposure of outperforming securities in the portfolio compared to benchmark.

Actual returns of the Fund are on a net basis (gross of tax and net of fees) and based on the performance of the Fund, and not the returns earned on the actual premiums/ contributions paid for the product.

* The benchmark index is a composite of 50% FBM KLCI Index and 50% of Market iBoxx ALBI Malaysia TR Index (Since June '16). Prior to that, the index used was HSBC Malaysia All Bond Index for the fixed income portion. Benchmark return is calculated on re-based basis. The source is from the subscription of Market Indices.

The NAV per unit of the Fund is the total market value of assets in the Fund divided by the total number of units of the Fund. Transaction costs, taxes and applicable fees are provided for in the net asset value.

Dividend Fund Monthly Report (May 2021)

Investment Objective

To achieve steady income stream with potential for capital growth over medium to long term by focusing mostly on high dividend yielding stocks and money market instruments. The aim of the Fund is to outperform the FBM KLCI Index over periods of five or more years.

Investment Strategy

To invest in a broad selection of companies listed on the Malaysian Stock Exchange. Using a relative value methodology, the fund focuses on undervalued stocks relative to fundamental value, with the aim of achieving an income stream, together with some degree of long-term capital gains.

Risks

The Fund is considered high risk given the exposure to equity securities. The following factors can potentially affect the value of the Fund; consumer sentiment, financial performance of the underlying companies, the performance of the industry and economy, and the share market in general, social and political factors, and the liquidity of the underlying assets.

The target market is clients wanting the surety of insurance protection, with an element of potential upside investment exposure.

Fund Performance

For the month ended May 2021, the fund had outperformed the benchmark by 105bps MoM (month-on-month). The outperformance was mainly driven by lower exposure of outperforming securities in the portfolio compared to benchmark.

Global Yakin Fund Monthly Report (May 2021)

Investment Objective

The fund aims for capital appreciation in the long term by investing in an international portfolio of Shariah-compliant equities and equity-related securities of companies with good growth potential.

Investment Strategy

The Fund is to feed into Aberdeen Standard Islamic World Equity Fund (ASWEF) which managed by Aberdeen Standard Islamic Investment (Malaysia) Sdn Bhd. The Fund invests in shariah approved securities across the globe.

The Fund seeks to achieve its objective by investing in an international portfolio of Shariah-compliant equities and equity-related securities of companies with good growth potential. The countries that the Fund will invest in will include, but not limited to Canada, United States of America, United Kingdom, France, Germany, Italy, Netherlands, Sweden, Switzerland, Japan, Australia, China, Hong Kong, Korea, Singapore, Taiwan, Brazil and Mexico.

Risks

The Fund is considered low risk given the exposure to only one underlying securities with no attempt to select stocks individually or to take defensive positions in declining markets. Risk is managed at the management level, where the asset allocation of the fund to be reviewed on regular basis, and adjusted to commensurate with the Investment Team view on the relative attractiveness of each asset class.

The following factors can potentially affect the value of the Fund; economic and political developments in related countries, foreign exchange fluctuation, illiquid and inefficient securities in the Emerging Markets, and the financial performance of the underlying companies.

The Fund is suitable for investors who seek capital appreciation over a long-term investment horizon and who are willing to accept high level of risk.

Fund Performance

For the month ended May 2021, the fund had underperformed the benchmark by 46bps MoM (month-on-month). The underperformance was mainly due to underperforming of the underlying securities compared to the benchmark index.

Jati Fund

Monthly Report (May 2021)

Investment Objective

The Jati Fund is invested in accordance with Shariah principles in Shariah sanctioned equities, money market instruments, and fixed income investments. The aim is to provide security and income, while maintaining and potentially increasing the value of capital over the medium to long-term. The Jati Fund is not a takaful product.

Investment Strategy

To invest in a broad selection of Shariah approved securities listed on the Malaysian Stock Exchange. Using a relative value methodology, it looks to buy stocks whose shares appear undervalued relative to fundamental value, with the aim of achieving an income stream, together with some degree of long-term capital gains.

Risks

The Fund is considered high risk given the exposure to equity securities. The following factors can potentially affect the value of the Fund; consumer sentiment, financial performance of the underlying companies, the performance of the industry and economy, and the share market in general, social and political factors, and the liquidity of the underlying assets.

The target market is clients wanting the surety of insurance protection, with an element of potential upside investment exposure.

Fund Performance

For the month ended May 2021, the fund had outperformed the benchmark by 317bps MoM (month-on-month). The outperformance was mainly driven by lower exposure of outperforming securities in the portfolio compared to benchmark.

Titan Fund

Monthly Report (May 2021)

Investment Objective

The Fund invests in MyETF Dow Jones U.S. Titans 50 ("MyETFDJ50") which aims to provide investment results that closely correspond to the performance of the Dow Jones Islamic Market U.S. Titans 50 Index.

Investment Strategy

MyETFDJ50 is managed by i-VCAP Management Sdn Bhd and it invests into 50 largest Shariah compliant companies listed in the U.S. MyETFDJ50 is a passively managed fund.

Risks

The Fund is considered low risk given the exposure to only one underlying securities with no attempt to select stocks individually or to take defensive positions in declining markets. Risk is managed at the management level, where the asset allocation of the fund to be reviewed on regular basis, and adjusted to commensurate with the Investment Team view on the relative attractiveness of each asset class.

The following factors can potentially affect the value of the Fund; economic and political developments in related countries, foreign exchange fluctuation, illiquid and inefficient securities in the Emerging Markets, and the financial performance of the underlying companies.

The Fund is suitable for investors who are seeking for diversification and investment opportunities in Shariah-compliant equities in the U.S. market and seeking liquid financial instruments with an index tracking feature.

Fund Performance

For the month ended May 2021, the fund had underperformed the benchmark by 498bps MoM (month-on-month).

Equity Market Review and Outlook

Market Review

The FBMKLCI Index fell 1.1% or 18 points MoM in May 2021 to close at 1,583.55. The market fell throughout the month and hit a low of 1,562 points before rebounding towards the end of the month. The weak performance was due to persistent increases in new Covid-19 cases in Malaysia, leading the government to expand MCO to the whole country from 12 May to 7 Jun. Average daily trading volumes in May fell to 6.6bil (vs. 7.2bil units in April), while average daily trading value fell to RM4bil (vs. RM4.2bil in April).

Local retail investors remained the largest net buyers (+RM485mil) during the month, while local institutional investors were the largest net sellers (-RM232mil) in the equity market. Foreign investors net sold RM161mil worth of Malaysian equities in May 2021, lower than the RM1,134mil net sold in April. As a result, cumulative YTD net foreign outflows since 2010 grew to RM36.4bil, while 5M21 net foreign outflow was RM3.0bil.

Globally, it was another strong equity market as economic momentum showed further signs of acceleration and the COVID-19 vaccine rollouts in the US and eurozone have continued to proceed well. In the US, Dow Jones Industrial index picked up 1.9% and the broader S&P 500 index closed 0.5% higher. Euro area was also showing positive returns with Bloomberg European 500 index closed 2.1% MoM higher. However, Asian market showed slightly negative performance where MSCI Asia APEX 50 ex-Japan closed -0.4% MoM. Increasing Covid-19 infections in a number of countries weighed on returns in a number of markets in the index, with Malaysia, Singapore and Thailand all ending the month in negative territory.

Market Outlook & Strategy

Traditionally, FBMKLCI index's performance tends to be positive in June, with the benchmark posting 0.3% MoM gain over the past 10 years and 0.6% in 43 years. We expect the market to be supportive by its attractive valuations at current levels of 1.60x as it is now below its 25-year historical average of P/B (1.86x). If Malaysia makes good progress in vaccinating 70% of its targeted population by end-2021 to achieve herd immunity, it may lift up the positive momentum to the market.

Technically, the benchmark has been trading sideways in May with a slight negative bias. We expect the market to continue this momentum with the trading range of 1,560 and 1,642 levels. The index is also trading between the 50-week EMA (1,578) and the longer term 200-week EMA (1,623), which implies the market's indecision on the longer-term direction. On the downside side, the KLCI must hold up above its 50-week EMA and the 1,560 lows for the longer-term bullish view to remain intact. Otherwise, a deeper correction may take place for the rest of the year. Near term support is seen at 1,560-1,570 level.

We believe that outlook for the local equity market is improving when the herd immunity is established by end of the year. It will be the key success factor as this will improve the domestic activities locally.

Fixed Income Review and Outlook

Market Review

Malaysia Government Securities (“MGS”) yield was seen steepening in May’21, backed by the worries of inflation risk and slower economy growth following the announcement of MCO 3.0. Brent crude oil prices continued to move higher to USD69.32/barrel (Apr’21: USD67.25/barrel) given the boosted optimism of returning demand. Ringgit weakened to MYR4.1252/USD (Apr’21: MYR4.0880/USD) due to the worsening COVID-19 pandemic in the country.

On the local economic data, the GDP growth remained in the negative territory at -0.5% YoY in 1Q’21 (4Q’20: -3.4% YoY) due to a year-long COVID-19 pandemic. Contraction was seen in various sectors such as services, mining and construction, which has offset the growth recovery in manufacturing sector and agriculture sector. Exports and Imports jumped higher to +63.0% YoY and +24.4% YoY respectively in Apr’21 (Mar’21: +31.0% YoY and +19.2% YoY respectively), mainly driven by low base effect, on-going global economic recovery, and higher commodity prices. All-in-all, the trade balance contracted to +MYR20.5bil as compared to +MYR24.2bil a month earlier.

Inflation surged rapidly to +4.7% YoY in Apr’21 (Mar’21: +1.7% YoY), mainly driven by the spike in Transport cost (Apr’21: +27.0% YoY; Mar’21: +9.8% YoY) as the global crude oil prices recovered to USD67.25/barrel from a low of USD25.27/barrel in a year ago. As a response to the higher global crude oil prices, the Government has decided to cap RON95 and diesel retail fuel prices at MYR2.05/litre and MYR2.15/litre respectively, while keeping RON97 floated.

Malaysia external reserves ticked higher to USD110.9bil as at end-May’21(end-Apr’21: USD110.8bil). The reserve is sufficient to cover 8.4 months of retained imports and 1.1x short-term external debt.

The auctions unveiled in May 2021 are as follow;

Government Auctions Issue	Issue Date	Amount (RM million)	Bid-cover (times)	Avg Yield (%)
30year Re-Issuance of GII (Mat 11/49)	10/5/2021	4,000.00	2.43	4.57
15year Re-Issuance of MGS (Mat 5/35)	20/5/2021	4,500.00	2.45	3.96
5year Re-Issuance of GII (Mat 3/26)	31/5/2021	4,500.00	2.00	2.73

Little change in the 10-Year UST Treasury (“UST”) yield as the investors are watching for any potential actions from the Federal Reserve amidst the rising inflation. The 10-Year UST yield moved slightly lower to 1.60% in May’21 compared to a month earlier at 1.63%.

Market Outlook & Strategy

Following the OPR cut by 125bps and SRR cut by 100bps in 2020, BNM is expected to tune monetary stance to slight dovish throughout 2021 given the hope of economic recovery post COVID-19 pandemic. The external risk factors such as trade war between US and China and the fluctuation in crude oil prices will continue to weigh on the local market, but we believe corporate bond space still provides attractive yields. As such, we will keep looking to buy on dips of corporate bonds if the opportunity arises.
